HIGHLIGHTS

— Cloud Infrastructure Engineer leading architecture for a fintech platform

— AWS Certified Cloud Practitioner

— 15+ cloud systems built, deployed and documented end-to-end

— Automated CI/CD with zero-downtime release patterns

— 20+ technical articles published on Medium

CORE COMPETENCIES

— **Cloud Platforms** — AWS (EC2, ECS/Fargate, EKS, ECR, Lambda, API Gateway, DynamoDB, Cognito, S3, VPC, ALB, CloudFront, SES)

— **Architecture** — Cloud architecture design, multi-AZ and serverless patterns, cost/risk trade-off analysis

— **Automation & IaC** — Terraform, Ansible, Bash

— **Containers** — Docker, Docker Compose, Kubernetes, Helm

— **CI/CD** — CodePipeline/CodeBuild, GitHub Actions, Jenkins

— **Monitoring** — CloudWatch, X-Ray, anomaly detection, Slack alerting

— **Security** — IAM, WAF, Secrets Manager, Vault, iptables

— **Languages** — Python, Bash, Go, JavaScript/Node.js

CERTIFICATIONS

AWS Cloud Practitioner Essentials — Dec 2025

AWS Cloud Quest: Cloud Practitioner — Jul 2025

AWS Cloud Bootcamp 2025 (CSN) — Sep 2025

PROFILE

Cloud Infrastructure Engineer leading cloud architecture and infrastructure strategy for Zizz, a stablecoin-to-naira fintech platform. Hands-on depth in AWS, Terraform, Docker and CI/CD automation, with production-style systems built end-to-end — ECS Fargate, ALB, RDS, VPC, serverless APIs and automated release pipelines. Brings a systems-first approach to scalability, reliability and security from a Mechanical Engineering background. AWS Certified. Documents every build publicly for auditability and knowledge transfer.

WORK EXPERIENCE

Cloud Infrastructure Engineer | *ZIZZINC (Zizz) — Full-time, Hybrid*

Apr 2026 – Present

- Lead cloud architecture and infrastructure strategy for Zizz, a stablecoin-to-naira fintech platform enabling instant crypto-to-cash conversion, P2P transfers and business invoicing.
- Own end-to-end cloud architecture decisions for the platform, balancing scalability, reliability and security.
- Evaluate and select cloud services and infrastructure patterns to support product growth.
- Drive adoption of CI/CD practices to improve deployment speed and release reliability.
- Shape the platform's infrastructure roadmap to support the company's next stage of growth.

Cloud Engineer | *Palette Labs — Full-time*

Jul 2025 – Jan 2026

- Implemented Infrastructure-as-Code with Ansible to standardise cloud configuration, reducing manual work and eliminating configuration drift.
- Containerised Node.js and Go applications with Docker, standardising development and production environments.
- Designed and maintained Jenkins CI/CD pipelines (automated tests, container builds, multi-stage deployments) across multiple parallel projects.
- Centralised secret management with AWS Secrets Manager and HashiCorp Vault, removing hardcoded credentials and enforcing least-privilege access.
- Led performance-focused refactoring and redeployment under Agile delivery with cross-functional teams.

AWS Cloud Bootcamp Participant | *CloudSec Network — Internship*

Jun 2025 – Aug 2025

- Completed hands-on labs across VPC, CloudWatch, EC2 and IAM and cloud security fundamentals; awarded the AWS Cloud Bootcamp 2025 credential (valid to Dec 2030, ID: CSN-TD80WCEF).

SELECTED PROJECTS

Automated CI/CD Pipeline (CineTrack) | CodePipeline · CodeBuild · ECS Fargate · ECR · ALB

- Built a zero-touch release pipeline (GitHub → CodePipeline → CodeBuild → ECR → ECS Fargate) for a containerised Node.js/Express API, using immutable task-definition revisions so rollback means repointing the service.
- Centralised secrets in SSM Parameter Store with runtime injection via the ECS task execution role; traced an AWS CLI failure to a local DNS resolver fault and documented the investigation publicly.

OCI Certified Architect Associate — Oct 2025

OCI Certified Foundations Associate — Jul 2025

OCI Certified AI Foundations Associate — Aug 2025

Oracle Data Platform Foundations — Oct 2025

Pursuing: AWS Solutions Architect – Associate

Three-Tier AWS Architecture (ZamWeather) | Terraform · EC2 · ALB · WAF · CloudFront

- Provisioned a three-tier VPC (public/private/data subnets, NAT, ALB) entirely in Terraform, then designed the CloudFront + WAF + HTTPS edge; documented the cost and account-quota trade-offs behind the deployed version.

Real-Time DDoS Detection Engine | Python · Linux · iptables · Slack API

- Built an autonomous detection and remediation system: sliding-window request tracking, rolling baseline, z-score anomaly triggers and kernel-level IP blocking via iptables, with Slack alerts.

Serverless PDF Tool (PDFFire) | AWS SAM · Lambda · API Gateway · S3

- Delivered PDF compress, convert and rotate operations as individual Lambda functions behind API Gateway, keeping running cost near zero within the free tier.

EDUCATION

BSc, Mechanical Engineering
University of Ibadan · Feb 2019 – Jan 2025

TECHNICAL WRITING

20+ in-depth build breakdowns and architecture explainers published on Medium (@ayotomiwavictor1), including “Kafka Without the Fear: How a Message Really Travels,” “Pods, Nodes, and etcd: A Practical Breakdown of Kubernetes Architecture,” and “Building a Zero-Touch CI/CD Pipeline on AWS.”
