Ayotomiwavictor1@gmail.com
Portfolio ([link](#))
GitHub: [Zaamaar](#)
Medium: [@ayotomiwavictor1](#)

• HIGHLIGHTS

- AWS Certified Cloud Practitioner
- 3 production-style cloud systems built end-to-end
- Zero-downtime stable/canary release pipelines
- Every build documented publicly

• CORE COMPETENCIES

- Cloud Platforms — AWS (EC2, ECS/Fargate, ECR, Lambda, API Gateway, DynamoDB, Cognito, S3, VPC, ALB, CloudFront, SES)
- Automation & IaC — Terraform, Ansible
- CI/CD — CodePipeline/CodeBuild, GitHub Actions, Jenkins
- Monitoring — CloudWatch, anomaly detection, Slack alerting
- Security — IAM, WAF, Secrets Manager, Vault, iptables
- Version Control — Git/GitHub, REST API design, Agile/Scrum
- Languages — Python, Bash, Go, JavaScript/Node.js

• CERTIFICATIONS

AWS Cloud Practitioner Essentials — Dec 2025
AWS Cloud Quest: Cloud Practitioner — Jul 2025
AWS Cloud Bootcamp 2025 (CSN) — Sep 2025
OCI Certified Architect Associate — Oct 2025
OCI Certified Foundations Associate — Jul 2025
OCI Certified AI Foundations Associate — Aug 2025

• PROFILE

Cloud/DevOps Engineer specialising in AWS infrastructure, Terraform, Docker, and CI/CD automation. Experienced in designing and deploying production-style cloud systems — ECS Fargate, ALB, RDS, VPC, and automated release pipelines — with a systems-first approach to reliability and security drawn from a Mechanical Engineering background. Comfortable working end-to-end across infrastructure provisioning, container orchestration, secrets management (AWS Secrets Manager, HashiCorp Vault), and operational monitoring (CloudWatch, anomaly detection, Slack alerting). AWS Certified. Documents every build publicly for auditability and knowledge transfer.

• WORK EXPERIENCE

DevOps Engineer Intern | HNG Tech (Internship)

Mar 2026 – May 2026

- Designed and implemented SwiftDeploy — a CLI tool automating the full Dockerised deployment lifecycle from a single manifest.yaml, including templated Nginx/Compose config generation, zero-downtime stable/canary release switching, pre-flight validation, and a chaos-testing engine for resilience verification.
- Architected and operated a self-service DevOps sandbox on a single Linux VM: on-demand isolated Docker environments, dynamic Nginx routing, TTL-based auto-cleanup, and a 6-endpoint REST API — delivering Heroku-like developer self-service without Kubernetes or a managed PaaS.
- Built a real-time anomaly detection and automated remediation engine in Python: sliding-window request tracking, rolling statistical baseline, z-score anomaly triggers, automated iptables-based IP blocking, and Slack alerting.
- Deployed and managed REST APIs on AWS EC2; designed CI/CD pipelines in GitHub Actions covering automated test, container build, and deployment stages.

Cloud Engineer | Palette Labs — Full-time

Jul 2025 – Jan 2026

- Implemented Infrastructure-as-Code using Ansible to standardise and automate cloud infrastructure configuration, reducing manual intervention and eliminating configuration drift.
- Containerised Node.js and Go applications with Docker, standardising development and production environments.
- Designed and maintained CI/CD pipelines in Jenkins covering automated testing, container builds, and multi-stage deployments across multiple parallel projects.
- Implemented centralised secret management using AWS Secrets Manager and HashiCorp Vault, removing hardcoded credentials and enforcing least-privilege access.
- Led performance-focused refactoring and redeployment under Agile delivery, collaborating cross-functionally on operational testing and release readiness.

AWS Cloud Bootcamp Participant | CloudSec Network — Internship

Jun 2025 – Aug 2025

- Completed the AWS Cloud Bootcamp organised by CloudSec Network (CSN), covering VPC, CloudWatch, EC2, and IAM through structured hands-on labs and real-world scenarios.

Oracle Data Platform Foundations — Oct 2025

Pursuing: AWS Solutions Architect – Associate

- ▶ Gained practical exposure to cloud security fundamentals and AWS infrastructure patterns; awarded the AWS Cloud Bootcamp 2025 credential (valid to Dec 2030, ID: CSN-TD80WCEF).

• SELECTED PROJECTS

Automated CI/CD Pipeline (CineTrack) | *AWS CodePipeline · CodeBuild · ECS Fargate · ECR · ALB*

- ▶ Designed and implemented a fully automated release pipeline (GitHub → CodePipeline → CodeBuild → ECR → ECS Fargate) for a containerised Node.js/Express API — automating build, image publishing, and zero-touch deployment on every push, verified via live endpoint checks and CloudWatch logs.
- ▶ Implemented centralised secret management using SSM Parameter Store with runtime injection via the ECS task execution role; independently diagnosed and resolved an infrastructure-layer DNS resolver failure blocking AWS CLI access, documenting the investigation publicly.

Three-Tier AWS Architecture (zamweather) | *Terraform · EC2 · ALB · WAF · CloudFront · HTTPS*

- ▶ Provisioned a production-style three-tier VPC architecture (public/private/data subnets, NAT gateway, ALB) entirely with Terraform, then hardened the public surface behind CloudFront, WAF, and HTTPS — all infrastructure version-controlled and reproducible.

Real-Time DDoS Detection Engine | *Python · Linux · iptables · Slack API*

- ▶ Designed and implemented an autonomous threat detection and remediation system: sliding-window request tracking, rolling statistical baseline, z-score anomaly triggers, and automated kernel-level IP blocking via iptables, with operational alerts delivered via Slack.

• EDUCATION

BSc, Mechanical Engineering

University of Ibadan · Feb 2019 – Jan 2025

• TECHNICAL WRITING

In-depth build breakdowns published on Medium (@ayotomiwavictor1), including “Building a Zero-Touch CI/CD Pipeline on AWS,” “I Built a Miniature Heroku from Scratch,” and “I Built a Real-Time DDoS Detection Engine from Scratch” — supporting documentation and knowledge-transfer practices.
